DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-9 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claims are directed to a method, process or system for calculating the reciprocal square root of a number via a mathematical algorithm. The claims are not limited to practical application of the mathematical algorithm because the reciprocal square root result is not a useful, concrete and tangible result. More specifically the result is not a tangible result because it is not a real-world result.

The claims are also directed to a program per se. Which the program contains functionally descriptive material the recording of the functionally descriptive material on some computer-readable medium, which would enable the functionality to be realized, fails to be recited.

Specification

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Art Unit: 2193
